SUMMARY OF QUALIFICATION

Self-directed builder specializing in process transformation and intelligent automation, from designing data-driven pricing frameworks to deploying production AI pipelines. Deloitte consulting background brings current-state to future-state rigor; startup experience at Clove built the prototype-and-scale muscle to execute in undefined territory and partner with engineering.

EDUCATION

Indiana University, School of Informatics and Computing, Bloomington, IN
Bachelor of Science in Informatics with Business Cognate

December 2021

PROFESSIONAL EXPERIENCES

Clove, Brand Inc. - Philadelphia, PA

October 2023 - Present

Senior Operations Analyst

- Independently prototyped and deployed two Shopify automation apps (Node.js/Railway): QuickDraft for bulk retailer order generation (150+ orders from one file upload, saving 3 hrs/day) and a Preorder Bulk Editor for SKU-level pre-order date management
- Built B2B Invoice Automation app integrating Shopify, Extensiv WMS, and QuickBooks Online, independently designing and shipping the solution that replaced a dedicated BPO role (\$10,400–\$13,000/year), reduced invoice errors, and accelerated book closing
- Architected end-to-end product launch automation pipeline using Claude, reimagining a fragmented, ad-hoc process into a scalable, repeatable playbook that auto-generates SKUs, assigns GS1 GTINs, produces Shopify import CSVs, and submits vendor portal tickets; reduced launch prep from days to hours
- Automated QVC dropship order processing with an hourly pipeline monitoring Rithum, generating labels, importing to Extensiv, and notifying the warehouse via Slack; maintained 100% on-time fulfillment within QVC's 48-hour chargeback window
- Presented a Claude enablement session at Clove's all-hands (20 employees), translating AI capabilities into role-specific use cases; automated the CX team's weekly open order audit using Claude in Chrome, categorizing unfulfilled and partially fulfilled orders into 5 actionable categories, and co-created a Claude SOP with the CX team to standardize the workflow
- Driving Clove's Korea market entry in partnership with WG Company, a Korean distributor selling through Musinsa, W Concept, and BOONTHESHOP, providing sell-through data by style, color, and size to guide a 1,000-unit initial shipment, navigating trademark resolution, and serving as direct liaison to WG Company's CEO to align both organizations on launch strategy

Operations Analyst

- Built and presented a Monthly Operations Dashboard covering return analysis, product development insights, inventory disposition strategy, and promotional effectiveness, informing cross-functional decisions on pricing, inventory, and A/B testing
- Owned 3PL vendor relationships and conducted monthly fulfillment and shipping cost audits, identifying billing discrepancies and overcharges; contributed to vendor evaluation process when exploring alternative fulfillment partners
- Designed and owned Clove's wholesale pricing operations from scratch, modeling shipping cost equations across 149 accounts to define tiered price breaks and launching a 7-tier Partnership Incentive Program (PIP); monthly order volume increased 264% following launch
- Led cross-functional execution for major trade shows (URA, ANCC) and brand collaboration launches end-to-end, collaborating with the design team on samples and materials, managing manufacturer negotiations and quality control, and owning all ordering and delivery logistics
- Introduced in-house demand planning at Clove, translating ambiguous demand signals into a structured forecasting model by analyzing sales velocity and inventory data by style and color for Core and Limited-Edition SKUs, applying comparable product benchmarks where no historical data existed; transition stabilized inventory levels and reduced OOS-driven order cancellations

Deloitte Consulting LLP - Chicago, IL

January 2022 - December 2022

Applied AI Analyst - Strategy & Analytics

- Data Analyst (Data Mapping Team) - Fortune 500 financial institution
 - Identified mapping logic for system of record (SOR) by addressing regulatory requirements, analyzed data from Hadoop using SQL, and provided recommendation for SOR
 - Managed offshore team, completing daily handoffs, delegating duties for the day, and solving and understanding issues
- Conversational AI Strategy Analyst - Fortune 500 health insurance company
 - Led AI adoption roadmap for a Fortune 500 health insurer at a consultancy specialized in process transformation, driving organizational change management across Personal Risk Services and Claims, aligning enterprise conversational AI capabilities to reimagine client experience at scale
 - Assessed organizational readiness and enablement gaps across use case selection, deployment phases, and change management drivers to sharpen AI adoption strategy and stakeholder alignment
